

Q1. Exception

Score: 10.00 TC: 3/3 passed

CODE

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);

        int[] arr = {10, 20, 30, 40, 50};

        int index = sc.nextInt();

        try{
            System.out.println(arr[index]);
        }catch(ArrayIndexOutOfBoundsException e){
            System.out.println("Exception: Invalid array index.");
        }
    }
}
```

INPUT

6

OUTPUT

Exception: Invalid array Index

Q2. IllegalArgumentException

Score: 10.00 TC: 3/3 passed

CODE

```
import java.util.Scanner;

public class Main{
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);

        int marks = sc.nextInt();

        try{
            if (marks < 0 || marks > 100){
                throw new IllegalArgumentException();
            }
            System.out.println("Valid marks: " + marks);
        }catch(IllegalArgumentException e){
            System.out.println("Exception: Invalid marks. Marks should be between 0 and 100.");
        }
    }
}
```

INPUT

120

OUTPUT

Exception: Invalid marks. Marks should be between 0 and 100.

Score: 10.00 TC: 3/3 passed

CODE

```
import java.util.*;
class Main{
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        String pass = sc.next();
        try{
            if(pass.length() < 8)
                throw new
                WeakPasswordException("Password must contain at least 8 characters.");
            System.out.println("Password accepted.");
        }
        catch(WeakPasswordException e){
            System.out.println("Exception: "+e.getMessage());
        }
    }
}
class WeakPasswordException extends Exception{
    WeakPasswordException(String s){
        super(s);
    }
}
```

INPUT

java123

OUTPUT

Exception: Password must contain at least 8 characters.

Q4. Email Validation

Score: 10.00 TC: 3/3 passed

CODE

```
import java.util.*;
class Main{
    public static void main(String[] args){
        Scanner s = new Scanner(System.in);
        String email = s.next();
        try{
            if(!email.contains("@"))
                throw new
                InvalidEmailException("Invalid email address.");
            System.out.println("Valid email address.");
        }
        catch(InvalidEmailException e){
            System.out.println("Exception: "+e.getMessage());
        }
    }
}
class InvalidEmailException extends Exception{
    InvalidEmailException(String s){
        super(s);
    }
}
```

INPUT

student.gmail.com

OUTPUT

Exception: Invalid email address.

Q5. Banking Transaction Using Exception Propagation

Score: 10.00 TC: 3/3 passed

CODE

```
import java.util.Scanner;
public class Main{
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        sc.next();
        int balance = sc.nextInt();
        sc.next();
        int withdrawAmount=sc.nextInt();
        try{
            withdraw(balance,withdrawAmount);
        }catch (InsufficientBalanceException e){
            System.out.println("Exception propagated to main().");
            System.out.println("InsufficientBalanceException: "+e.getMessage());
        }
    }
    static void withdraw(int balance,int withdrawAmount)throws InsufficientBalanceException{
